

Dear Hiring Team,

I am excited to apply for the Full Time Software Engineer position at Hemut.

I recently completed my Bachelor of Engineering in Information Technology and have gained hands-on software development experience through internships and full-stack projects. During my internship as a Software Engineer at Intern Labs and as a Java Full Stack Developer Intern, I worked on developing web applications, building REST APIs, debugging production issues, collaborating with teams, and delivering reliable software solutions.

What particularly attracts me to Hemut is the opportunity to work in a fast-moving startup environment where engineers have real ownership of the product. I enjoy solving challenging problems, learning new technologies quickly, and building software that creates measurable impact for users.

One of my most significant projects is Job Hook, an AI-powered Job Aggregator Portal that integrates multiple job APIs and provides personalized job recommendations. Through this project, I gained experience in backend development, API integrations, database design, authentication systems, and full-stack application development. I have also built projects such as a Hospital Management System and an Online Shopping System, strengthening my skills in software architecture, REST APIs, and scalable application development.

My technical background includes Java, Spring Boot, React, MySQL, Git, and RESTful services. While your stack includes Python, FastAPI, and Next.js, I am confident in my ability to adapt quickly to new technologies. Throughout my internships and projects, I have consistently demonstrated the ability to learn unfamiliar tools and deliver results.

I am excited about the opportunity to contribute to Hemut's mission of transforming the trucking industry through technology and would welcome the chance to discuss how my skills, projects, and enthusiasm for software engineering can contribute to your team.

Thank you for your time and consideration.

Sincerely,

Aniket Vijay Solanke
